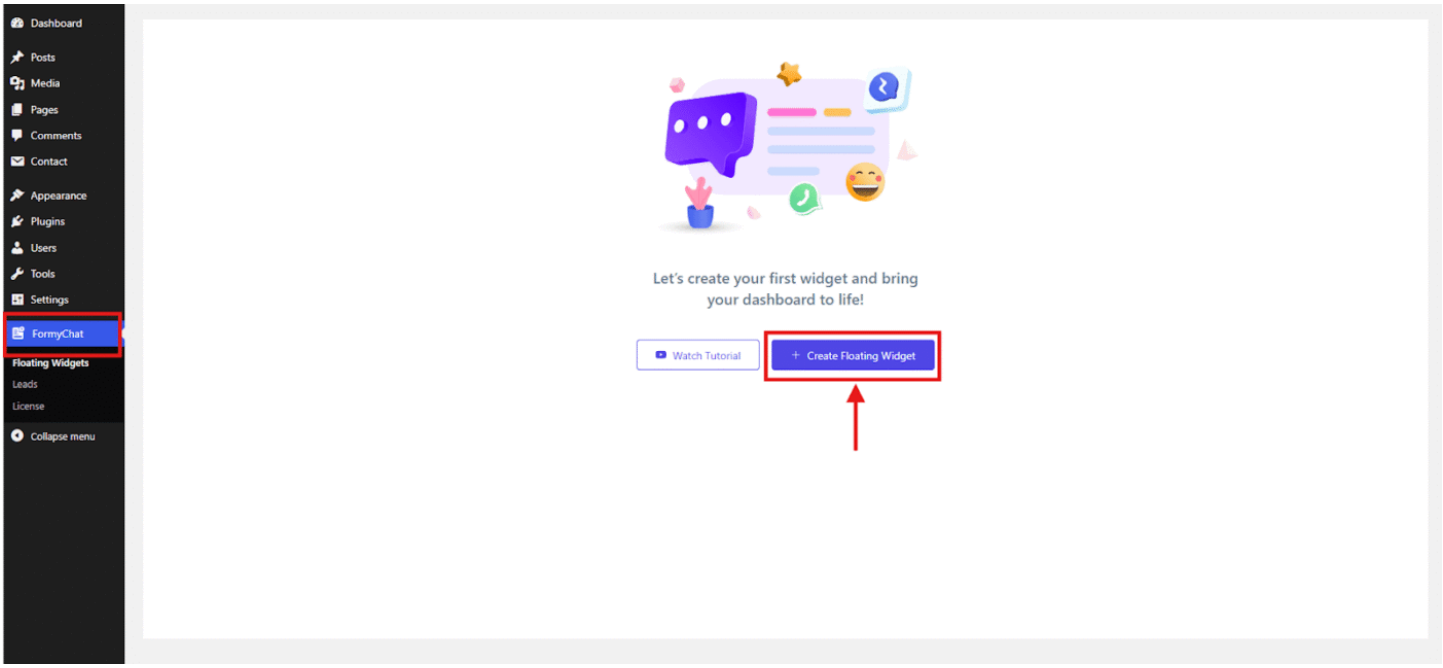
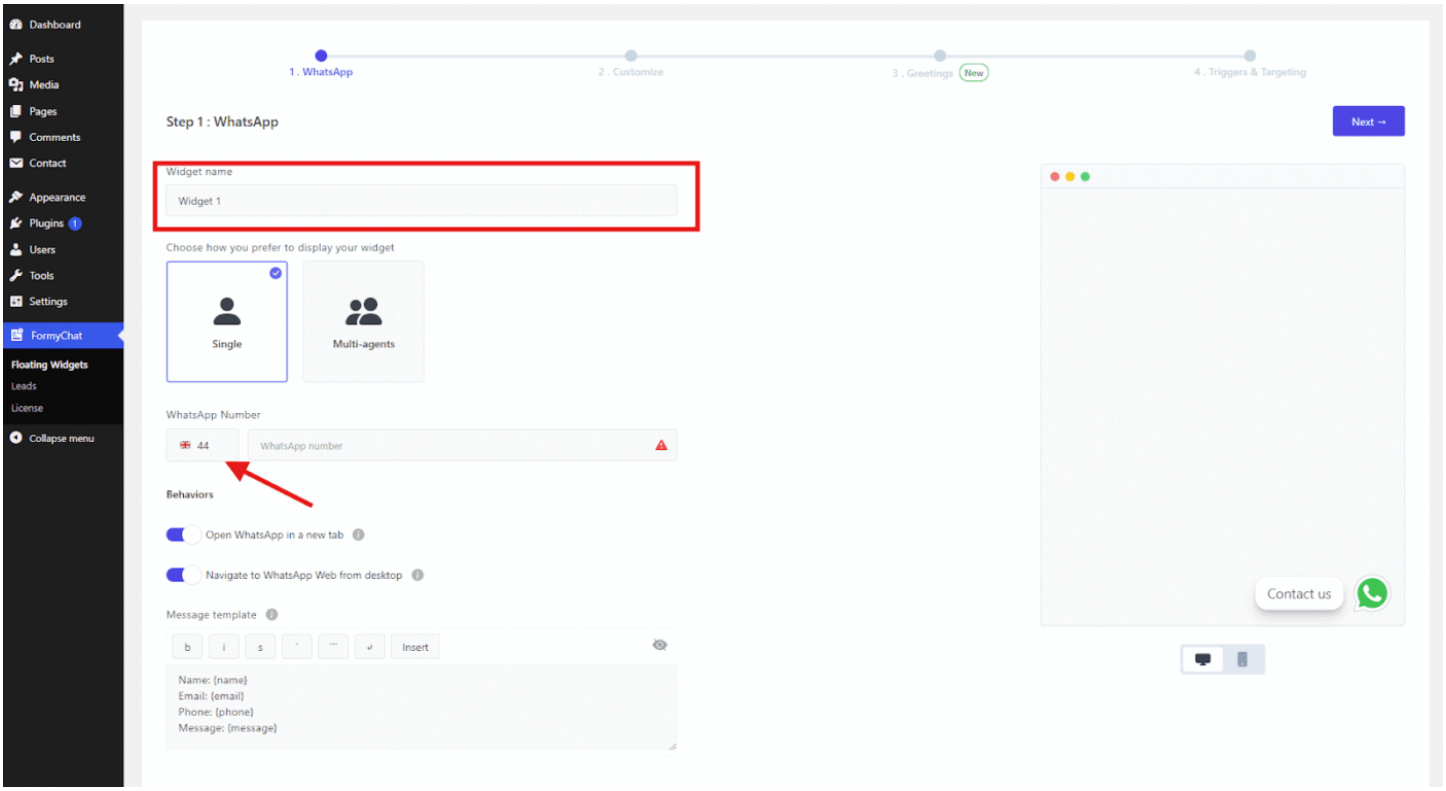
How to Customize FormyChat Widget

FormyChat · https://wppool.dev/docs/how-to-customize-formychat-widget/

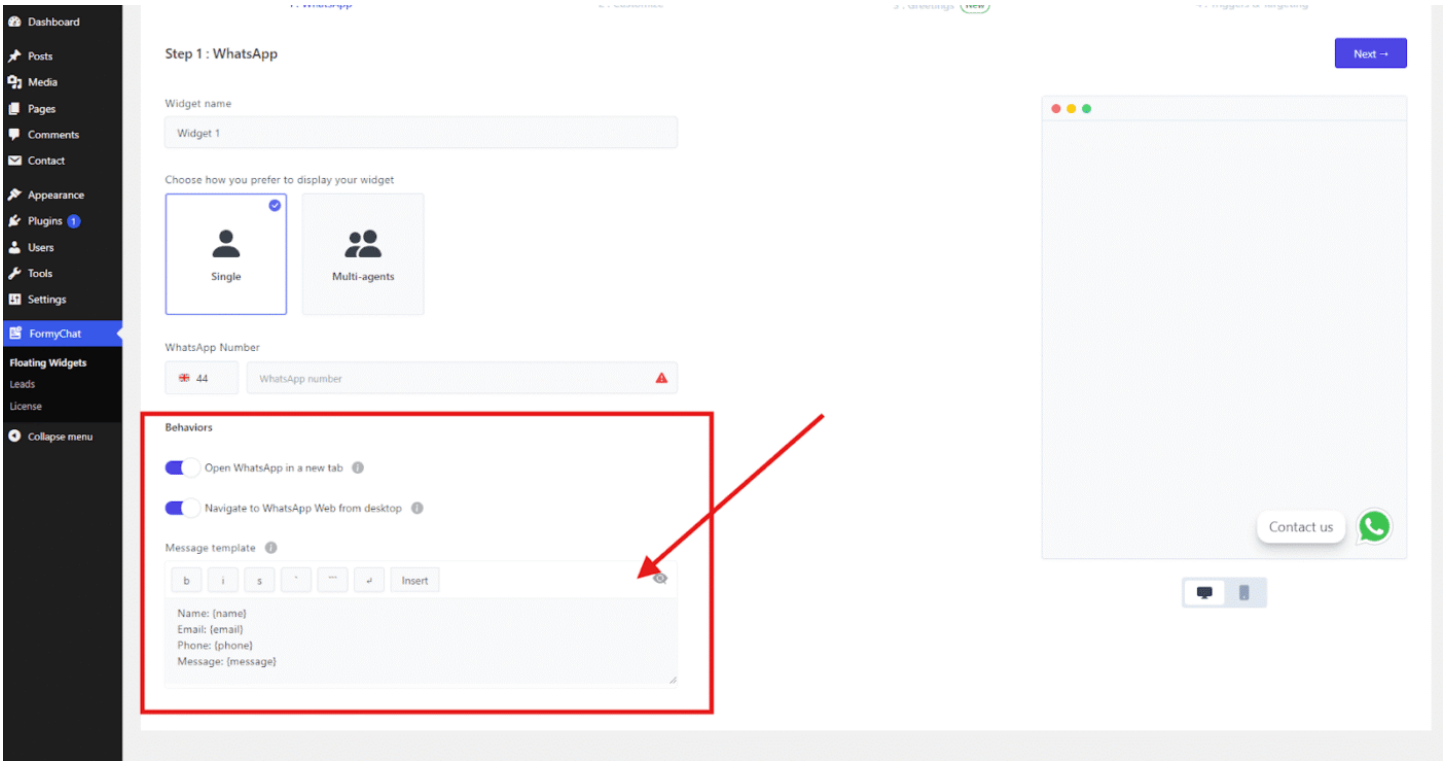
To get started, navigate to the **FormyChat** plugin in your **WordPress dashboard** and click the **Create Floating Widget** button.



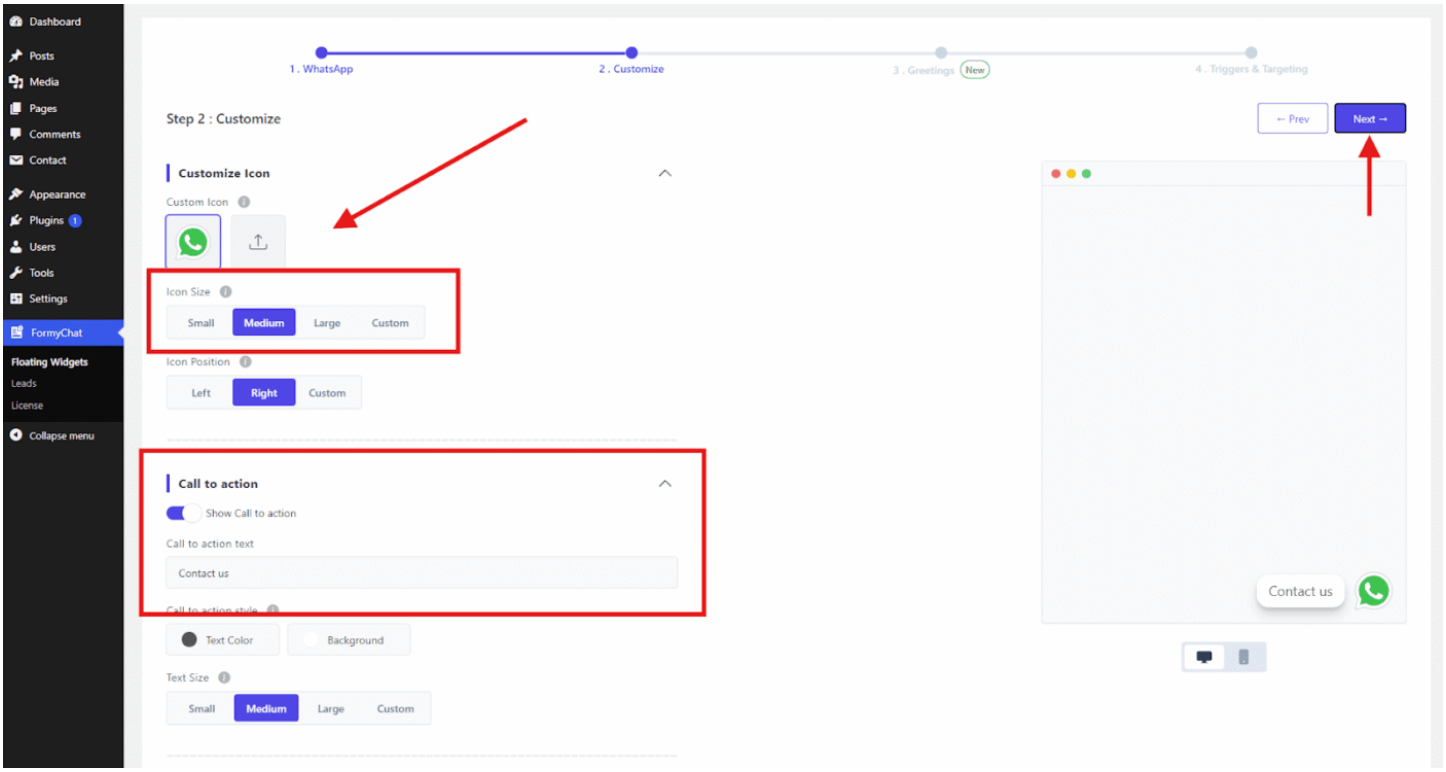
Give your widget a meaningful name so you can easily identify it later. Next, select your **country code** and enter your **WhatsApp number** to link the widget to your account.



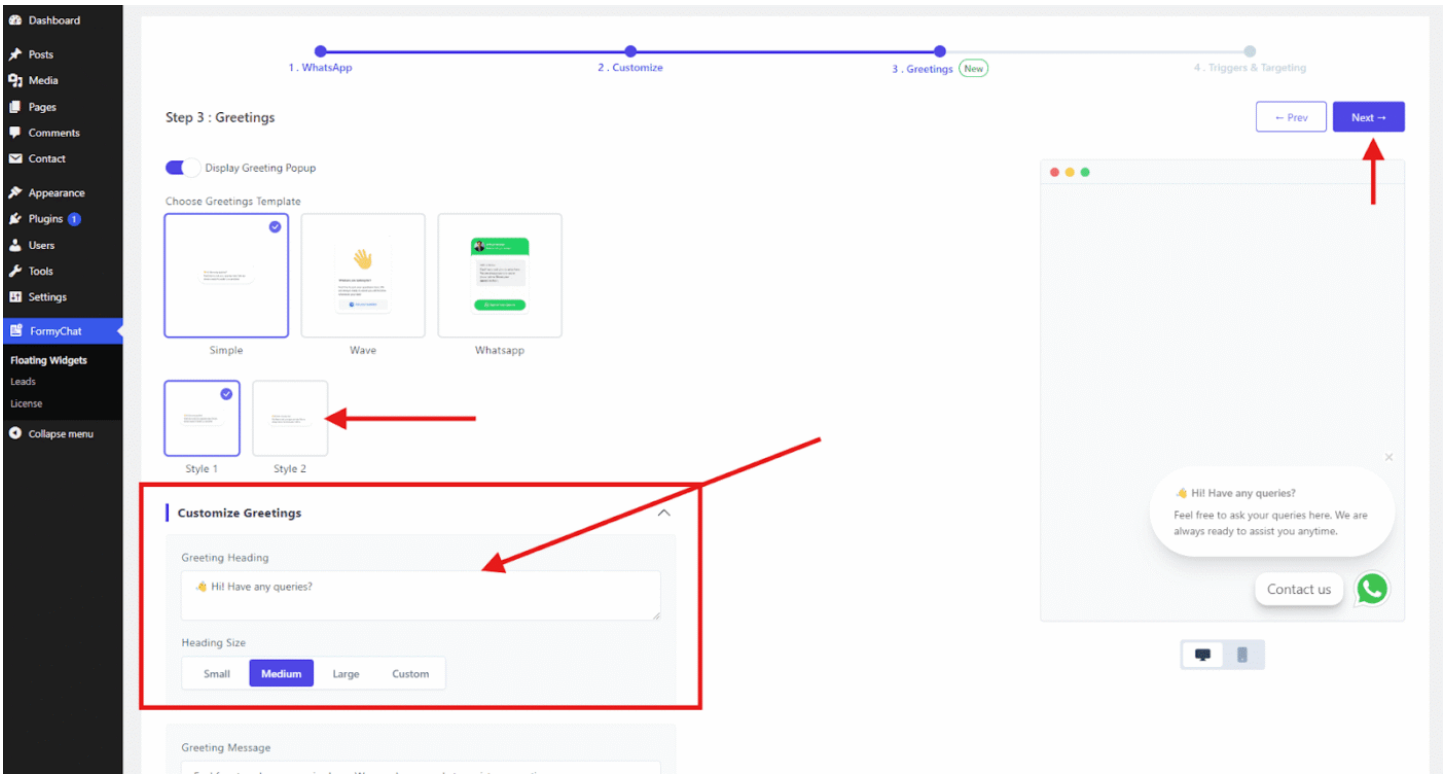
Afterward, customize the message template. Once you’re satisfied with your message template, click Next.



In the customization section, you have full control over the widget's design, Choose an **icon**, and adjust its **size**. Set a **call to action** that encourages users to engage with the widget. Customize the widget's **colors**, **styles**, and **sizes** to fit seamlessly with your website's design. After making your customizations, click **Next**.



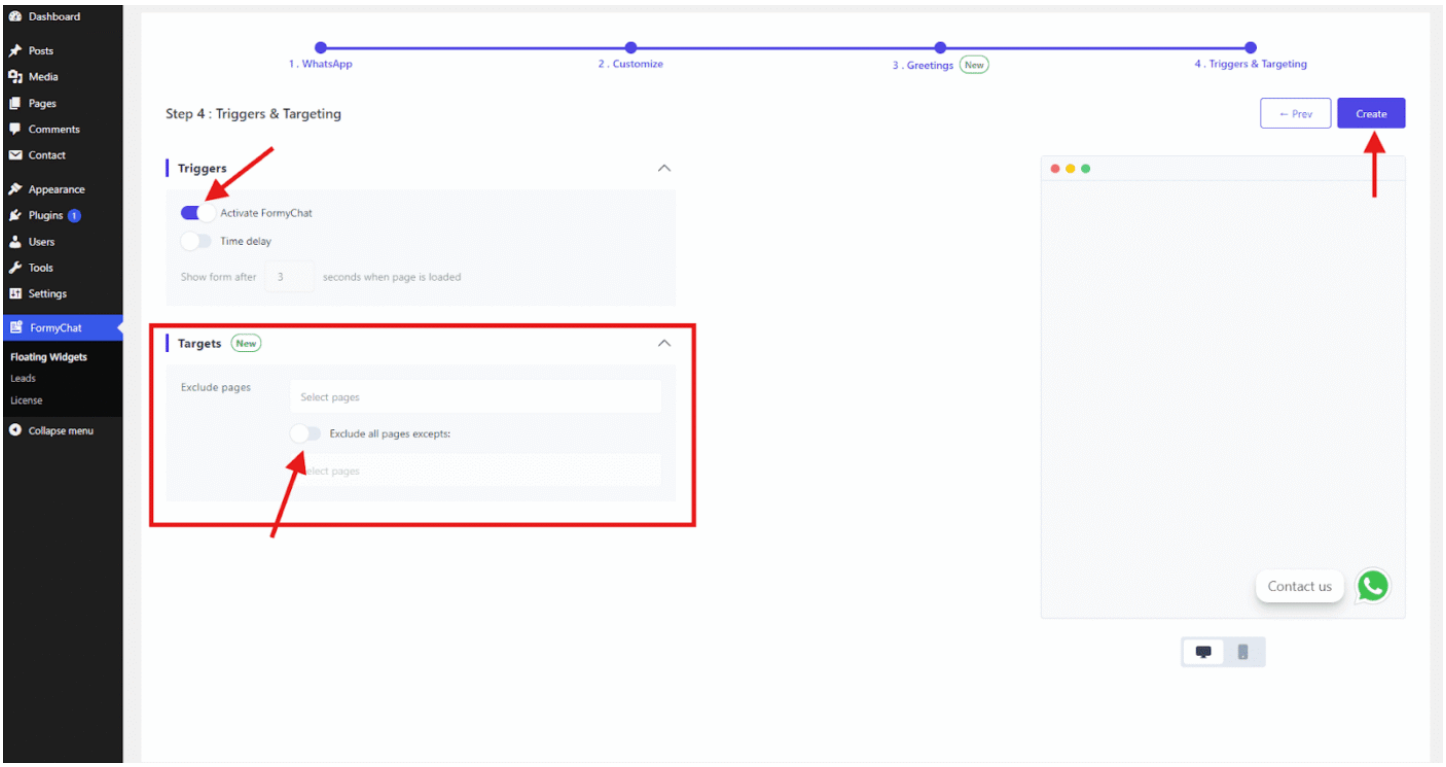
In the greetings section, you can enable the **Display Greetings Popup** that will display a welcome message to users when they visit your site. Customize the greeting message to make it more engaging and personal, then click **Next**.



Now, set the triggers for when the widget should appear on your site.

You can specify which pages should display the widget and even exclude specific pages if needed.

Once you’re done with the settings, click **Create** to finalize your widget setup.



Your setup is now complete! Click Done, and your first FormyChat Floating Widget is ready to go live on your site.
