How to Exclude active subscription& membership orders from archiving.

ArchiveMaster · https://wppool.dev/docs/how-to-exclude-active-subscription-membership-orders-from-archiving/

Overview:

ArchiveMaster allows you to **exclude active subscription and membership orders from archiving**. This ensures that recurring billing and subscription/membership management functionality continue to work without interruption.

Supported Plugins

This feature supports the following subscription and membership plugins:

Subscription Plugins

- **WooCommerce Subscriptions**
- **YITH WooCommerce Subscription**
- **Subscription for WooCommerce**

Membership Plugins

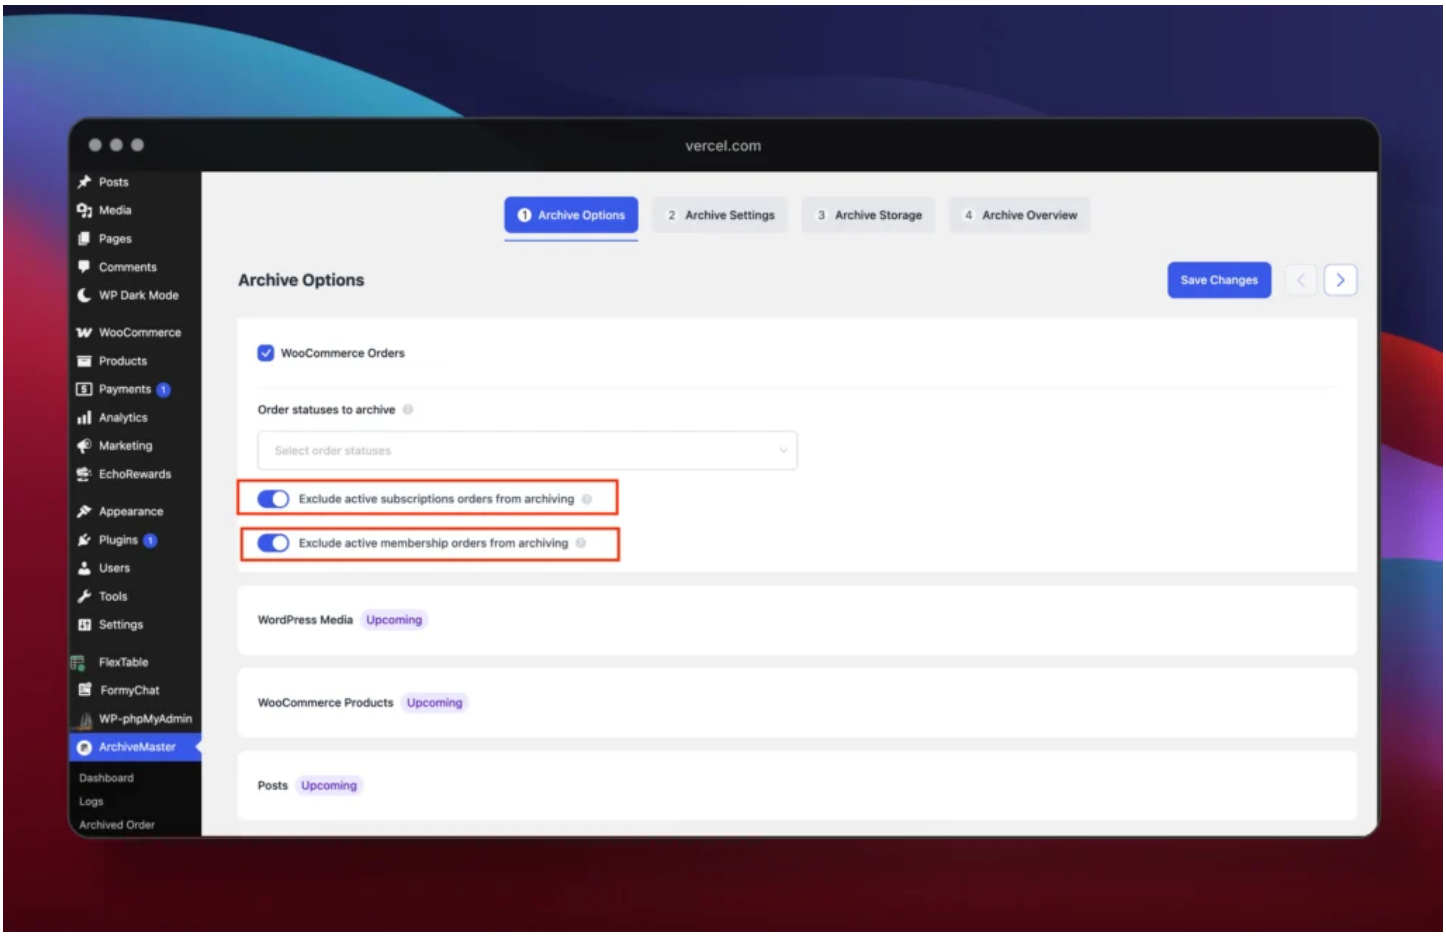
- **WooCommerce Subscriptions**
- **Membership For WooCommerce**

By default, this feature is **enabled** to protect active subscriptions and memberships.

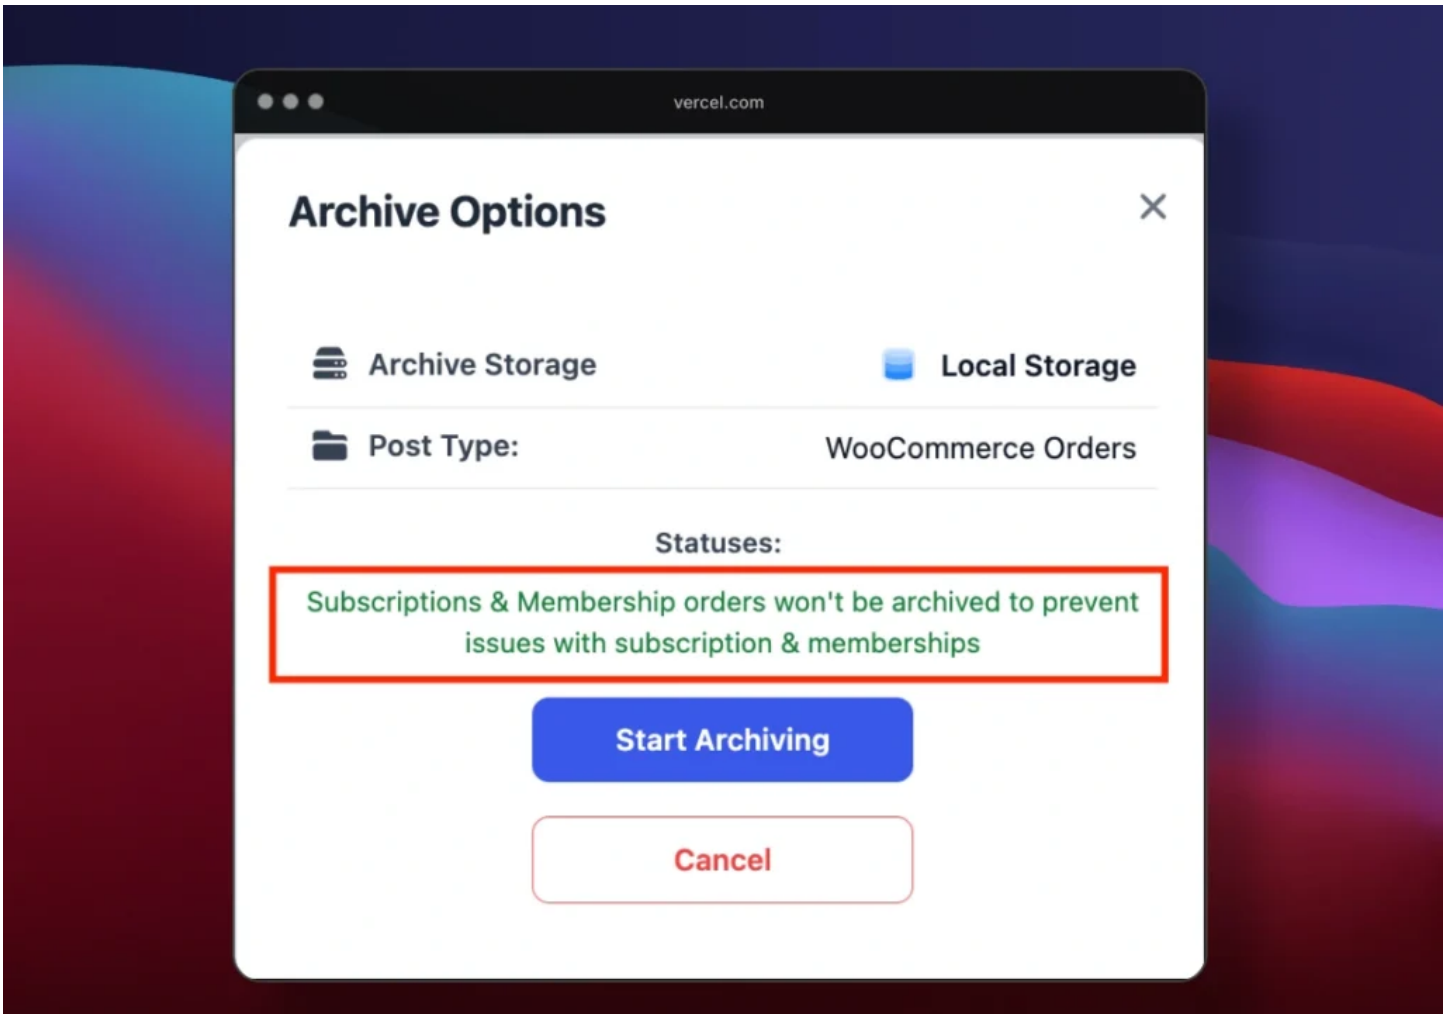
How It Works:

Default Behavior:

- **Enabled by default**:
  - Exclude active subscription orders from archiving
  - Exclude active membership orders from archiving.



When you start the archive process, a **pop-up notification** appears, confirming that: "Subscriptions & Membership orders won't be archived to prevent issues with subscription & memberships."



Best Practice Recommendation:

Keep the feature **enabled** to prevent issues with recurring billing, subscription renewals, and membership access. Only disable if you fully understand the impact on your customers' subscriptions/memberships.
