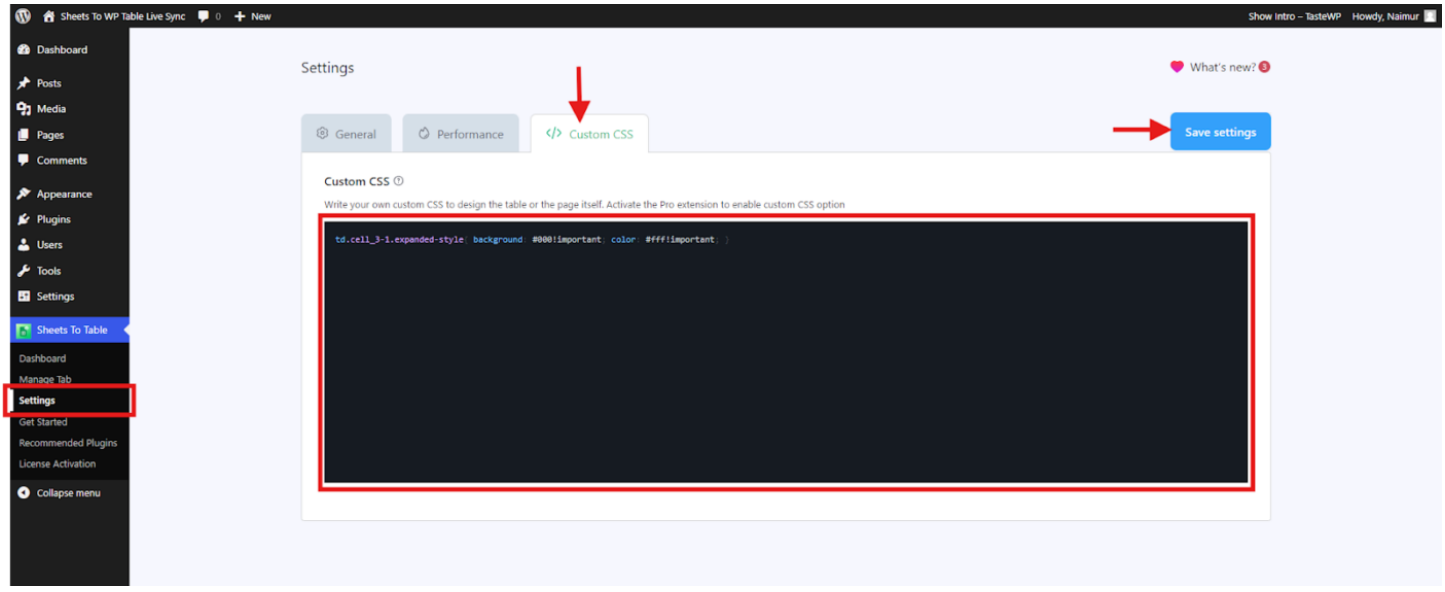
How to use custom CSS support in Google Sheets to WP Table Live Sync

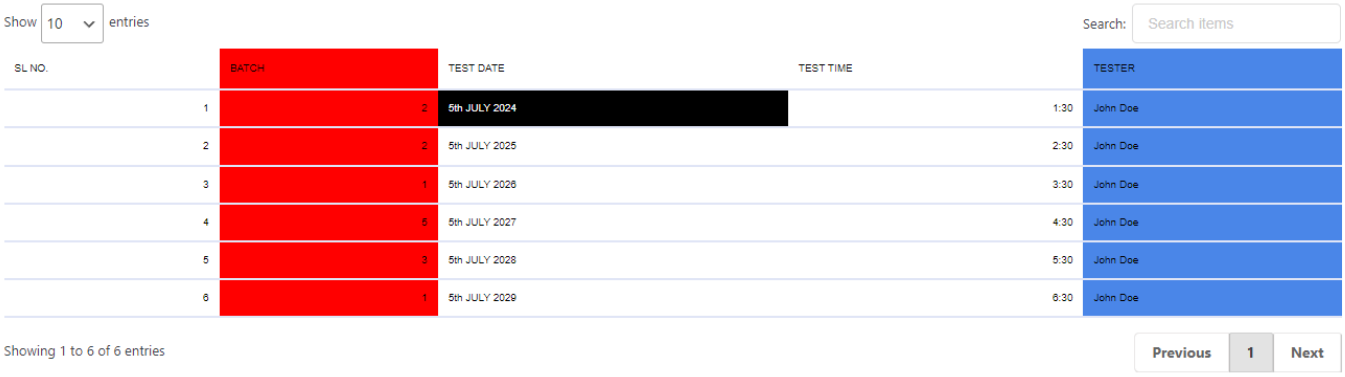
FlexTable - Sheets to WP Table Live Sync · https://wppool.dev/docs/how-to-use-custom-css-support-in-google-sheets-to-wp-table-live-sync/

You can use **Custom CSS** code to change anything you want in the table. For example, Let's change this specific cell's color to make it different from other cells.

Now, just got to **Settings** from Sheets to Table plugin dashboard. Write your CSS code on the box of **Custom CSS** and then hit **Save settings**.



Your changes are now applied to the website.



That’s it. Extremely easy to use.
