How to Use FlexTable with Divi Builder (Step-by-Step)

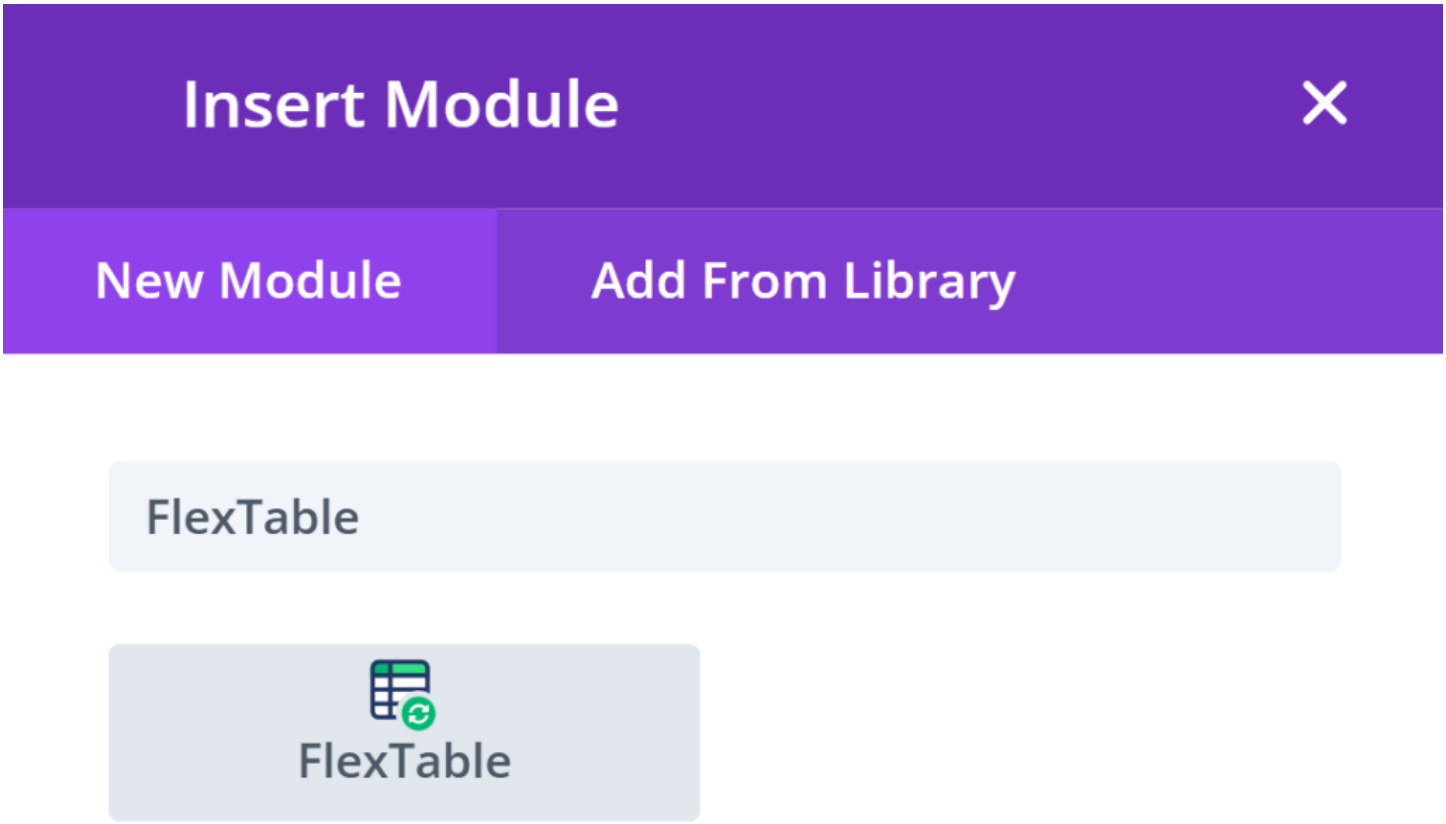
FlexTable - Sheets to WP Table Live Sync · https://wppool.dev/docs/how-to-use-flextable-with-divi-builder/

FlexTable is now fully compatible with the **Divi Theme and Divi Builder**, allowing users to insert FlexTable tables directly as a **native Divi module**.

We have introduced a **dedicated FlexTable Divi Module**. This module enables users to search for, select, and embed FlexTable tables visually without manually adding shortcodes.

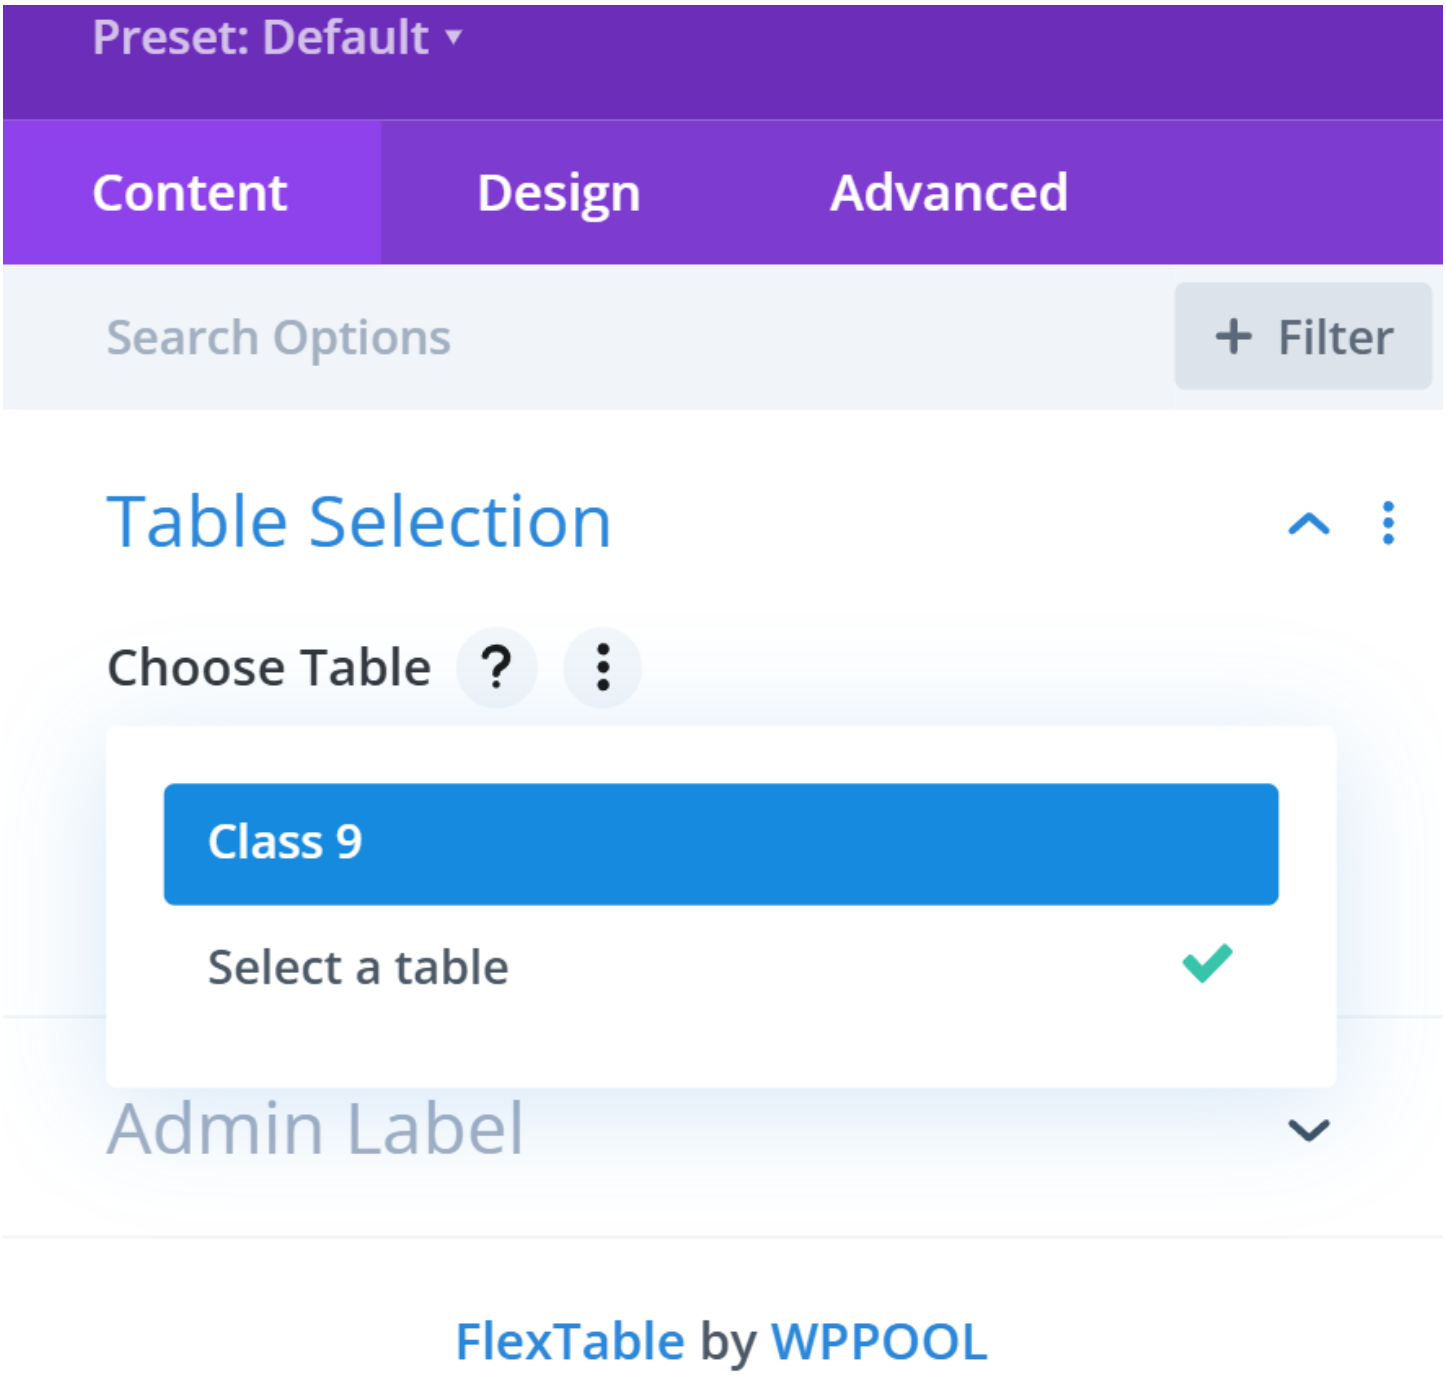
Step 1: Add the FlexTable Module

1. Inside the Divi Builder, click **Add Module (+)**.
2. Search for **“FlexTable”**.
3. Select the **FlexTable module** from the list.



Step 2: Select a FlexTable Table

1. Open the **FlexTable module settings**.
2. Locate the **Table Selection** option.
3. Choose the desired FlexTable table from the dropdown.
4. Save the module.



The selected table is automatically embedded; no shortcode is required.

Note on Visual Builder Preview: Visual Builder (live preview) support may be implemented in a future update, depending on guidance and support from the Divi team.

How it looks from the frontend

The selected FlexTable is rendered on the frontend. FlexTable functionality works as expected.
