WP Dark Mode for Developers (Methods and Hooks)

WP Dark Mode · https://wppool.dev/docs/wp-dark-mode-for-developers-methods-and-hooks/

If you are a developer, you can use the following JavaScript hooks to control dark mode easily.

- To activate Dark Mode, run this method using JavaScript (works on console too): **WPDarkMode.activate()**
- To deactivate Dark Mode use: **WPDarkMode.deactivate()**
- To check if currently Dark Mode is active or not, use this getter property: **WPDarkMode.isActive**
- To detect the user's system preference, run this getter property: **WPDarkMode.isDeviceDark**
- To prevent CSS overrides on specific elements, simply apply the following line: **.wp-dark-mode-ignore**
- Also, we have event listeners for dark mode, and separately for dark mode switches. If you would like to do something automated when dark mode is changed: **WPDarkMode.onChange(() => { // your automated task })**
